PROFESSIONAL SUMMARY

Aspiring full-stack developer with a strong foundation in web development. Core member of USCKIIT (UI Path Student Community KIIT). Passionate about problem-solving, teamwork, and learning new technologies. Enjoys chess, dance battles, and team-based projects.

EDUCATION

Kalinga Institute of Industrial Technology (KIIT)

B.Tech - Computer Science

2022 – 2026

Bhubaneswar, Odisha

M.D.B. D.A.V Public School

High School Education

2020 – 2022

Bankura, West Bengal

EXPERIENCE

Zidio Development

Backend Engineer

Certificate

Remote

- Developed and optimized backend REST APIs improving performance and scalability.
- Implemented secure user authentication, role-based access, and MongoDB interactions.
- Collaborated with frontend team for API integration and feature delivery.

TECHNICAL SKILLS

Languages: C++, Python, Java, JavaScript, TypeScript

Technologies: MERN Stack, Next.js

Frameworks: React.js, Node.js, Express.js

Dev Tools: Git, Google Cloud Platform, Visual Studio, IntelliJ

Core skill: Object-Oriented Programming(Java), Database Management System, Operating System, Computer Network, Machine Learning.

PROJECTS

VocalLearn (AI Learning Portal) | NEXTJS, Clerk, Supabase

- Developed an AI-powered learning portal enabling podcast-style sessions with voice interaction using Vapi.
- Used Clerk for robust authentication, Supabase for database management, and Sentry for real-time error tracking.
- Implemented a smart lesson-tracking and search system that displays completed and pending lessons, and enables users to instantly filter past sessions by subject or companion name for quick retrieval.

AI Image Generator | MERN STACK

- Developed a full-stack AI Image Generation web application using the MERN stack (MongoDB, Express.js, React.js, Node.js), providing user authentication with secure login/signup and session management.
- Integrated OpenAI's DALL-E model to generate high-quality AI images based on user prompts, with a backend API layer handling model requests, validations, and image processing.
- Implemented a credit-based usage system, where new users receive 5 free credits and the system automatically manages credit deduction, access control, and redirecting to the pricing page when credits are exhausted.
- Integrated Razorpay Payment Gateway to enable secure online payments for purchasing additional credits, including order creation, transaction verification, and updating user credits post-payment.

PUBLICATION

- Conference Paper: API-Enabled Smart Garbage Management System (IEEE Xplore)
